EDUCATION

Information Security of Telecommunication Systems

College of Communication 54 Moscow

Certifications

CompTIA Security+ (2025)

Badges

RangeForce Cybersecurity Analyst
(SOC Analyst 1-2 Elite, MITRE ATT&CK, Elastic,
Ransomware Hunter, Pen Tester)

SKILLS

- **SIEM:** Splunk, IBM QRadar, Elastic
- **EDR:** CrowdStrike Falcon, AES
- **Threat Intelligence:** VirusTotal, AbuseIPDB, Shodan, GreyNoise
- **Frameworks:** MITRE ATT&CK, NIST
- **Log Analysis:** Sysmon, Windows Event IDs, Raw Telemetry Analysis
- **Network Analysis Tools:** Wireshark, Suricata, TCPDump
- **Ticketing Tools:** Jira
- **Security Operations Skills:** Incident Response, Threat Hunting, Vulnerability Scanning, Risk Management, Communication
- **Cloud & Systems:** AWS, Windows Security

ALEXANDER ISOEV

CYBERSECURITY ANALYST

PROFESSIONAL SUMMARY

Cybersecurity Analyst with hands-on SOC experience in monitoring, threat detection, and incident response. Experienced in analyzing and mitigating security incidents using Splunk, IBM QRadar, Elastic SIEM, and CrowdStrike Falcon. Proficient with firewalls, intrusion detection systems (IDS), and vulnerability scanners to strengthen organizational defenses. Skilled in applying MITRE ATT&CK and NIST frameworks to identify adversary techniques and reduce risk exposure. Dedicated to improving detection capabilities, investigating malware, and ensuring continuous security operations.

• EXPERIENCE

December 2024 - August 2025

Cybersecurity/SOC Analyst

CYDEO / Philadelphia, PA

- Monitored and triaged high-fidelity security alerts across Splunk, IBM QRadar, and Elastic SIEM within a fast-paced SOC environment.
- Conducted deep-dive forensic investigations into multi-stage intrusions, identifying advanced techniques such as UMPPC hook bypassing, memory injection, and process hollowing.
- Utilized CrowdStrike Falcon EDR for endpoint detection, response, and threat containment.
- Analyzed raw telemetry and Advanced Event Search (AES) logs to detect lateral movement via SMB admin shares and internal NetBIOS scanning activity.
- Collaborated on tuning EDR/SIEM detection logic to reduce false positives for administrative Living-off-the-Land (LotL) tools, enhancing alert fidelity.
- Contributed to SOC playbook development and enhanced alert-handling workflows to streamline response times.

• PROJECTS

• Advanced Phishing & Targeted Malware Analysis

Executed a full-lifecycle forensic investigation into a targeted phishing campaign, analyzing SPF/DKIM/DMARC bypasses and mapping staging. Neutralized masqueraded payloads (.pdf.exe) and developed enterprise-wide IOCs.

• Multi-Stage RDP Intrusion & Lateral Movement Analysis

Executed a deep-dive forensic investigation into a targeted RDP compromise involving UMPPC hook bypassing and memory injection. Identified SMB-based payload delivery and mapped reconnaissance via raw NetBIOS telemetry analysis.

• Web Application Attack & WAF Bypass Correlation

Analyzed automated SQLi/XSS campaigns and detected WAF bypasses via PCRE limit exhaustion. Correlated diverse event logs into a unified attack timeline to remediate critical web server vulnerabilities.

• Remote Command Execution (RCE) Forensic Investigation

Neutralized a critical RCE attempt on a public-facing web application by identifying shell command injection patterns. Conducted a post-incident forensic review to ensure zero host compromise and strengthen ingress filtering.

• Cloud Infrastructure Compromise & Response (AWS)

Investigated unauthorized AWS Console access involving credential abuse and administrative privilege escalation via SSH. Neutralized fileless C2 communication and identified systemd-based persistence to ensure full cloud environment recovery.
